in this essential guide to conception pregnancy and birth dr simon atkins unravels the science and presents the latest and most reliable evidence for making babies

## **Babies 2007**

do you want to ensure that the lovely baby coming into your family soon will be a born genius yes you read that right medical science has developed various ways in which parents can make sure that babies will grow up to be geniuses these methods are steeped in scientific theory and are not just old wives tales that we are so used to hearing if you take the steps right now you could ensure that the baby that s going to add to your family in a few months will be clever at birth itself but time is of the essence most of these methods need to be implemented when the baby is still in the womb it is how the mother and father behave during the pregnancy that has a serious impact on the baby s prenatal development at this time you may not be able to see your baby but the baby is very much active inside the womb the baby is quite receptive to things that they can hear they are picking up things as you speak if their vocal cords haven t developed as yet it doesn t mean that the baby isn t learning the baby is learning every moment it is inside the womb this is something parents don t much concern themselves with during pregnancy parents are only concerned about the physical wellbeing of the baby but little do they realize that it is also extremely important to look after the mental health of the baby the brain develops very fast in babies even before most organs and hence mental development

begins extremely early parents need to realize this biological fact and take steps to ensure that their babies get as much mental care as they get physical care during their days in the womb and their early years
