what does the future hold for the welfare state in the post industrial 21st century political and economic forces are threatening the taxation regimes of highly globalised capitalist societies prompting an urgent debate around the function of the welfare state and how we pay for it in a challenge to current policy and thinking david byrne and sally ruane deploy the concepts and analytical tools of marxist political economy to better understand these developments and the possibilities they present for social change using the snp in scotland as an illustrative case study current debates are related to a critical understanding of the relationship between taxation and spending issues that are fundamental to early 21st century politics and the future of the welfare state

effective and impartial public administration is the foundation of state legitimacy this was understood 4 500 years ago when urukagina the ruler of a small country in mesopotamia proclaimed the first known reform of public service the quality of public administration will be even more important in the 21st century successful states will be those that recognise public service as a key determinant of national competitive advantage that realisation will generate a radical change in the image of the civil servant from dull uninspired public official to passionate advocate of the common good this transformation will be the product of the complex challenges arising from the interweaving of globalisation with the 4th industrial revolution these and related developments are forcing governments around the world to search for public service that can respond to the unprecedented range of opportunities and threats emerging from a rapidly evolving international

context in an increasingly frenetic world ruled by wicked ostriches and black elephants governments require a civil service capable of achieving five outcomes i unlocking the creativity and collaborative spirit needed to solve complex problems ii overcoming the fallacy that the private sector is inherently more innovative and efficient than the public service iii developing societies that are perceived by their citizens as fair iv fostering the trust of citizens in their governments and v bolstering the legitimacy of the state the author who is director of the united nations development programme s global centre for public service excellence in singapore suggests that these interconnected aims will result in a new phenomenon the public recognition by political leaders and citizens that future prosperity political stability environmental sustainability and social cohesion are dependent on committed and creative civil servants passionate about promoting the long term national interest i shall pass through this world but once any good therefore that i can do or any kindness that i can show to any human being let me do it now let me not defer or neglect it for i shall not pass this way again mahatma gandhi

this is a book about the news the way it is written and the forms it takes it examines the relation between the content of public information and the potential affect of new technologies on the degree and type of information available in the public forum tom koch uses concrete

casebook examples to demonstrate the degree to which news information can be changed through the efficient and cost effective application of online bibliographic resources accessed by personal computers koch argues that new computer based technologies will revolutionize news and public information by fundamentally altering the relation between writer and news subject he shows how electronic databases by making enormous amounts of data on virtually every subject available to the news writer or editor have changed the equation which has defined news since at least the 1920s to make clear the degree to which these systems will transform news the author demonstrates how online resources can be used efficiently and inexpensively by generalists practical issues of online use are presented within the context of both the parameters of contemporary journalism and the means by which these technologies address its limits two separate chapters one describing search technologies and the other reviewing database organization will be of practical value to both neophyte and journeyman news and public information writers alike using examples from his own and other s work koch demonstrates ways to carry out simple and inexpensive searches his book will be especially important to the news or research librarian reporter and the public information or public relations writer
