the suicidal proclivity of our time writes the acclaimed philosopher j budziszewski is to deny the obvious our hearts are riddled with desires that oppose their deepest longings because we demand to have happiness on terms that make happiness impossible why and what can we do about it budziszewski addresses these vital questions in his brilliantly persuasive new book the line through the heart the answers can be discovered in an exploration of natural law a venture that with budziszewski as our expert guide takes us through politics religion ethics law philosophy and more natural law the author states plainly but provocatively is a fact about human beings as surely as we have hands and feet we have the foundational principles of good and evil woven into the fabric of our minds from this elemental fact emerges a natural law theory that unfolds as part of a careful study of the human person thus budziszewski shows natural law forms a common ground for humanity but this common ground is slippery while natural law is truly an observable part of human nature human beings are hell bent quite literally on ignoring it the mere mention of the obligations imposed on man by his nature will send him into a rage in this sense the line through the heart explores natural law as not simply a fact and a theory but also a sign of contradiction while investigating the natural law and its implications budziszewski boldly confronts and offers a newly integrated view of a wide range of contemporary issues including abortion evolution euthanasia capital punishment the courts and the ersatz state religion being built in the name of religious toleration written in budziszewski s usual crystalline style the line through the heart makes clear that natural law is a matter of concern not merely to scholars it touches how each of us lives and how all of us live together his profoundly important examination of this subject helps us make sense of why habits that run against our nature have become second nature and why our world seems to be going mad

a comprehensive source for microwave and wireless circuit design the commercial wireless circuits and components handbook reviews the fundamentals of transmitters and receivers then presents detailed chapters on individual circuit types it also covers packaging large and small signal characterization and high volume testing techniques for both devices and circuits this handbook not only provides important information for engineers working with wireless rf or microwave circuitry it also serves as an excellent source for those requiring information outside of their area of expertise such as managers marketers and technical support workers who need a better understanding of the fields driving their decisions

computational learning theory presents the theoretical issues in machine learning and computational models of learning this book covers a wide range of problems in concept learning inductive inference and pattern recognition organized into three parts encompassing 32 chapters this book begins with an overview of the inductive principle based on weak convergence of probability measures this text then examines the framework for constructing learning algorithms other chapters consider the formal theory of learning which is learning in the sense of improving computational efficiency as opposed to concept learning this book discusses as well the informed parsimonious ip inference that generalizes the compatibility and weighted parsimony techniques which are most commonly applied in biology the final chapter deals with the construction of prediction algorithms in a situation in which a learner faces a sequence of trials with a prediction to be given in each and the goal of the learner is to make some mistakes this book is a valuable resource for students and teachers
