meiosis is a type of cell division that reduces the chromosome number by half $2n$ to n leading to the formation of four non identical daughter cells it is crucial for sexual reproduction in eukaryotes meiosis involves two divisions so it s typically broken down into meiosis i and meiosis ii

meiosis is the process in eukaryotic sexually reproducing animals that reduces the number of chromosomes in a cell before reproduction many organisms package these cells into gametes such as egg and sperm the gametes can then meet during reproduction and fuse to create a new zygote
