Military Intelligence 1996 Leon Trotsky and Antonio Gramsci are two of the most important Marxist thinkers of the 20th century. This book explores the similarities and the differences between their philosophical and political theories. The first and second chapters deal with a still under-investigated aspect of Trotsky's thought, i.e. his reflections on the issue of hegemony. The third chapter focuses on Gramsci's critique of Trotsky in his prison notebooks, analysing Gramsci's knowledge of Trotsky's positions as well as the scope and limits of Gramsci's critique. The fourth chapter consists of a critical rereading of Perry Anderson's essay 'Antinomies of Antonio Gramsci' originally published in 1976 and republished in 2017, and an analysis of the book 'Gramsci and Trotsky in the Shadow of Stalinism' by Emanuele Saccarelli. The result is an investigation that offers new insight into both Trotsky's and Gramsci's thought while proposing a new point of view from which to interpret revolutionary theory and strategy in the contemporary scenario. One of the main topics addressed throughout the three essays is the specific position of the problem of hegemony in a theory of permanent revolution, demonstrating that Trotsky had a particular understanding of the question of hegemony and that Gramsci in turn introduced a concept of hegemony that is closely associated with an idea of permanent revolution such that the dynamics of the relationship between democratic struggles and socialist struggles presented in both theories are very similar.

Military Intelligence Professional Bulletin 1996 The early history of American settlement, pioneering and independence is marked by fascinating characters and events often shrouded in legend. Filmmakers have sought to capture these characters as diverse as Daniel Boone, Francis Marion, and Pocahontas, and events as disparate as the Lost Colony, the Boston Tea Party, and the French and Indian War. This comprehensive filmography provides production information and commentary on all films and television episodes set during the years between the first settlements in the future United States and the fledgling country's war of 1812 with Britain. Films are arranged alphabetically and a detailed introduction provides a thorough overview of the period with references to films chronicling specific events.

**The 1980 Guide to the Evaluation of Educational Experiences in the Armed Services: Army** 1980 This landmark joint publication between the National Air and Space Museum and the American Institute of Aeronautics and Astronautics chronicles the evolution of the small gas turbine engine through its comprehensive study of a major aerospace industry. Drawing on in-depth interviews with pioneers, current project engineers, and company managers, engineering papers published by the manufacturers, and the tremendous document and artifact collections at the National Air and Space Museum, the book captures and memorializes small engine development from its earliest stage. Leves and Fleming leap back nearly 50 years for a first look at small gas turbine engine development and the seven major corporations that dared to produce, market, and distribute the products that contributed to major improvements and uses of a wide spectrum of aircraft. In non-technical language, the book illustrates the broad-reaching influence of small turbines from commercial and executive aircraft to helicopters and missiles deployed in recent military engagements. Detailed corporate histories and photographs paint a clear historical picture of turbine development up to the present. See for yourself why the history of North American small gas turbine aircraft engines is the most definitive reference book in its field. The publication of the history of North American small gas turbine aircraft engines represents an important milestone for the National Air and Space Museum (NASM) and the American Institute of Aeronautics and Astronautics (AIAA). For the first time, there is an authoritative study of small gas turbine engines, arguably one of the most significant spheres of aeronautical technology in the second half of
