design system design is a step by step process of defining a particular software s architecture modules components etc system design is defined as a process of creating an architecture for different components interfaces and modules of the system and providing corresponding data helpful in implementing such elements in systems the system design interview is a way to simulate a realistic scenario where you are working together with the interviewer to determine the best design decision getting the perfect answer isn t necessarily the most important thing here it s some of the other things you can show like how do you handle being challenged system design is the process of designing the architecture and components of a software system to meet specific business requirements the process involves defining the system s architecture components modules and interfaces and identifying the technologies and tools that will be used to implement the system what is system design a software
