autochthonous and franchised heritage not as separate or opposing elements but as part of the same process of contemporary globalised identity making which contributes to the development of newly emergent cosmopolitan identities the book critically examines the processes that are involved in the franchising of heritage and its cultural effects it does so by examining the connections and tensions that emerge from combining autochthonous and franchised heritage in the united arab emirates providing a unique window in to the process of creating hybrid heritage in non western contexts it develops new ideas about how this global phenomenon works how it might be characterised and how it influences and is itself affected by local forms of heritage by exploring how autochthonous and franchised heritage is produced in abu dhabi in the united arab emirates it becomes clear that western dominated practices are often challenged and perhaps more importantly that new ways of understanding producing and living with heritage are being articulated in these previously marginal locations the book offers innovative insights into heritage as a transnational process exploring how it operates within local national and international identity concerns and debates it will appeal to scholars and students interested in critical heritage studies museums tourism cultural studies and middle eastern studies

## **The European Dimension of Germany's Energy Transition 2019-02-07**

this book addresses the interactions between  
germany s energy transition and the eu s energy  
policy framework it seeks to analyze the manifold  
connections between the prospects of the  
proclaimed energy union and the future of germany  
s energy transition and identifies relevant  
lessons for the transformation at the eu level  
that can be learned from the case of germany as a  
first mover of transforming energy systems towards  
renewables the various repercussions political  
economic and systemic from the national transition  
are explored within the eu context as it responds  
to the german transition taking into account both  
existing frictions and potential synergies between  
predominantly national sustainability policies and  
the eu s push towards harmonized policies within a  
common market the book s overall aim is to  
identify the most critical issues in order to  
avoid pitfalls and capitalize on opportunities

## Rethinking Suburbs 2024-04-11

rethinking suburbs provides answers to how can we design and plan neighborhoods in which non motorized mobility is a viable and efficient alternative and how the street systems and alleys of neighborhoods can be designed and retrofitted to make their urban fabrics more efficient and integrated streets play significant roles in meeting multiple sustainability objectives this research addresses abu dhabi s and dubai s street connectivity at the neighborhood local and city global scales it focuses on two parameters of street network analysis efficiency and centrality efficiency is evaluated in terms of directness noting that network designs that provide short and direct access between origins and destinations are more efficient centrality is evaluated using graph theory metrics that enable the identification of high and low accessibility locations within networks the conventional suburban model of low

outrigger systems are rigid horizontal structures designed to improve a building's stability and strength by connecting the building core or spine to distant columns much in the way an outrigger can prevent a canoe from overturning outriggers have been used in tall narrow buildings for nearly 500 years but the basic design principle dates back centuries in the 1980s as buildings grew

taller and more ambitious outrigger systems eclipsed tubular frames as the most popular structural approach for supertall buildings designers embraced properly proportioned core and outrigger schemes as a method to offer far more perimeter flexibility and openness for tall buildings than the perimeter moment or braced frames and bundled tubes that preceded them however the outrigger system is not listed as a seismic lateral load resisting system in any code and design parameters are not available despite the increasingly frequent use of the concept the council on tall buildings and urban habitat s outrigger working group has addressed the pressing need for design guidelines for outrigger systems with this guide a comprehensive overview of the use of outriggers in skyscrapers this guide offers detailed recommendations for analysis of outriggers within the lateral load resisting systems of tall buildings for recognizing and addressing effects on building behavior and for practical design solutions it also highlights concerns specific to the outrigger structural system such as differential column shortening and construction sequence impacts several project examples are explored in depth illustrating the role of outrigger systems in tall building designs and providing ideas for future projects the guide details the impact of outrigger systems on tall building designs and demonstrates ways in which the technology is continuously advancing to improve the efficiency and stability of tall buildings around the world
