Core Curriculum for Nephrology Nursing 2015-04-01 acute is described on [medicinenet.com](http://www.medicinenet.com) as an illness with an abrupt onset that is often of short duration rapidly progressive and in need of urgent care once the symptoms appear they can change or worsen swiftly synonyms of acute include severe critical drastic dire dreadful terrible awful grave bad serious desperate and dangerous the nurses who work with patients with acute kidney injury aki know these descriptions are accurate they also know that there is enough information to warrant a separate module devoted to aki the work of helen williams who served as the module's editor is greatly appreciated this module offers information on managing an acute care program causes of aki and the nutritional needs of the patient hemodialysis

water treatment peritoneal dialysis continuous renal replacement therapy crrt slow low efficiency daily dialysis sledd and therapeutic apheresis are all topics addressed in this module there is also a new chapter that nurses in the chronic setting will find useful it addresses the patient who has a ventricular assist device vad more patients with vads are requiring dialysis yet there has been little published on this subject

Renal Nursing 2019-08-26 to assist professional nephrology nurses to promote and practice excellent nursing care anna has developed systematic standards of clinical practice for continuous renal replacement therapy the outcome based standards are designed in the nursing process format to convey theoretical and practical guidelines to nephrology nurses and to promote high quality care

Proceedings of the European Dialysis and Transplant Nurses Association, European Renal Care Association 1985 cardiovascular complications are not only responsible for more than half of our patients mortality they also represent the bulk of everyday problems in a dialysis unit yet the space allocated to them in the major textbooks covers only 2 8 of their total content the origins of this book lie in many years of day to day care of dialysis patients it gradually became clear to the author that systematic application of well known pathophysiological principles could improve patients conditions beyond expectations more importantly it appeared that world literature was mainly concerned with evaluating risk factors and that efforts to improve prognosis were concentrated on urea removal it is important therefore to notice that volume control the central issue of this book is not incorporated into the adequacy concept while primarily intended for dialysis doctors the author sincerely hopes that dialysis nurses who carry the lion s share of day to day responsibility for dialysis patients will also find this book a useful and practical guide to dialysis treatment

Core Curriculum for Nephrology Nursing 2015-04-01 first edition edited by janel parker in 1998

Hemodialysis 2016-01-27 as the frequency of hemodialysis sessions has always been a concern it is not astonishing that interest in quotidian daily hemodialysis appears to be growing worldwide the main reasons for more frequent dialysis are to maximize well being and minimize both intra and interdialytic symptoms as well as to improve the treatment of patients with severe underlying medical problems particularly cardiovascular disease moreover studies also indicate overall potential cost savings as compared with current conventional hemodialysis there are two options available namely short daily and long nightly treatments the main difference centers on the ability of the nightly regimen to remove greater amounts of phosphate and beta 2 microglobulin even so there is no doubt that both treatments are highly preferable to conventional three times weekly dialysis further issues which are discussed include the requirements necessary to run dialysis programs vascular access requirements and the management of complications and risks such as calcium and phosphorus control this is the first publication devoted solely to daily hemodialysis therapies concentrating on clinical and technical issues it is an important contribution to the practical development of daily hemodialysis and is highly recommended to nephrologists nurses managers of renal programs and others involved in renal care
