this book advocates that teachers should play an active role in high stakes language testing and that more weight should be given to teacher judgement this is likely to increase the formative potential of high stakes tests and provide teachers with a sense of ownership the implication is that the knowledge and skills they develop by being involved in these tests will feed into their own classroom practices the book also considers the arguments against teacher involvement e g the contention that teacher involvement might entrench the practice of teaching to the test or that teachers should not be actively involved in high stakes language testing because their judgement is insufficiently reliable using contributions from a wide range of international educational contexts the book proposes that a lack of reliability in teacher judgement is best addressed by means of training and not by barring educators from participating in high stakes language testing it also argues that their involvement in testing helps teachers to bolster confidence in their own judgement and develop their assessment literacy moreover teacher involvement empowers them to play a role in reforming high stakes language testing so that it is more equitable and more likely to enhance classroom practices high stakes language tests that adopt such an inclusive approach facilitate more effective learning on the part of teachers which ultimately benefits all their students

integrating timing considerations to improve testing practices synthesizes a wealth of theory and research on time issues in assessment into actionable advice for test development administration and scoring one of the major advantages of computer based testing is the capability to passively record test taking metadata including how examinees use time and how time affects testing outcomes this has opened many questions for testing administrators is there a trade off between speed and accuracy in test taking what considerations should influence equitable decisions about extended time accommodations how can test administrators use timing data to balance the costs and resulting validity of tests administered at commercial testing centers in this comprehensive volume experts in the field discuss the impact of timing considerations constraints and policies on valid score interpretations administrative accommodations test construction and examinees

experiences and behaviors and how to implement the findings into practice these 12 chapters provide invaluable resources for testing professionals to better understand the inextricable links between effective time allocation and the purposes of high stakes testing the open access version of this book available at taylorfrancis com has been made available under a creative commons attribution non commercial no derivatives 4 0 license

in statistical theory and practice a certain distribution is usually assumed and then optimal solutions sought since deviations from an assumed distribution are very common one cannot feel comfortable with assuming a particular distribution and believing it to be exactly correct that brings the robustness issue in focus in this book we have given statistical procedures which are robust to plausible deviations from an assumed mode the method of modified maximum likelihood estimation is used in formulating these procedures the modified maximum likelihood estimators are explicit functions of sample observations and are easy to compute they are asymptotically fully efficient and are as efficient as the maximum likelihood estimators for small sample sizes the maximum likelihood estimators have computational problems and are therefore elusive a broad range of topics are covered in this book solutions are given which are easy to implement and are efficient the solutions are also robust to data anomalies outliers inliers mixtures and data contaminations numerous real life applications of the methodology are given
