this book examines several distinctive literary figurations of posthuman embodiment as they proliferate across a range of internationally acclaimed contemporary novels clones in kazu oishiguro's never let me go animal human hybrids in margaret atwood's oryx and crake toxic bodies in indra sinha's animal's people and cyborgs in jeanette winterson's the

stone gods while these works explore the transformational power of the biotech century they also foreground the key role human capital theory has played in framing human belonging as an aspirational category that is always and structurally just out of reach making contemporary subjects never human enough in these novels the dystopian character of human capital theory is linked to fantasies of apocalyptic release as such these novels help expose how two interconnected genres of futurity the dystopian and the apocalyptic work in tandem to propel each other forward so that fears of global disaster become alibis for dystopian control which in turn becomes the predicate for intensifying catastrophes in analyzing these novels justin omar johnston draws attention to the entanglement of bodies in technological environments economic networks and deteriorating ecological settings

Journal of the Patent and Trademark Office Society

1999

dynamic oligopolistic competition has implications both for the strategic management of firms and for the design of an effective competition policy consequently the present book considers the issue from a private and social perspective it discusses the potential pro and anticollusive effects of long term business strategies especially for cooperation and reinvestment in production financing and management compensation in markets with fluctuating demand the method of supergame theory is applied to integrate long run decisions and different types of demand into the analysis aside from its contributions to the theoretical literature the book provides valuable insights into the design of competition policy the observed development of prices is an indicator of the extent of collusion in the market and can thereby be used to assess antitrust regulation in certain business areas and to focus the resources of competition authorities on markets where conditions are conducive to collusion

as canada s social safety net continues to be eroded and the gap between rich and poor in our society continues to grow it becomes increasingly urgent to confront the problems of poverty in fresh and creative ways political scientist françois blais offers a bold new proposal to assist the poorest and most disadvantaged in our society a guaranteed basic income or allowance to be paid to every canadian citizen elaborating on ideas endorsed by two nobel laureates blais outlines how a program might be implemented that would replace the present profusion of social assistance programs with a single universal benefit stimulating and original ending poverty offers an important contribution to the ongoing

debate over social justice in this country originally published in french as un revenu garanti pour tous translated by jennifer hutchison

Strategic Competition in Oligopolies with Fluctuating Demand

2006-02-17

the purpose of communicating in the anthropocene intimate relations is to tell a different story about the world humans especially those raised in western traditions have long told stories about themselves as individual protagonists who act with varying degrees of free will against a background of mute supporting characters and inert landscapes humans can be either saviors or destroyers but our actions are explained and judged again and again as emanating from the individual and yet as the coronavirus pandemic has made clear humans are unavoidably interconnected not only with other humans but with nonhuman and more than human others with whom we share space and time why do so many of us humans avoid deny or resist a view of the world where our lives are made possible maybe even made richer through connection in this volume we suggest a view of communication as intimacy we use this concept as a provocation for thinking about how we humans are in an always already state of being in relation with other humans nonhumans and the land

Anarchy and the Environment

1999-01-01

maintains that communication is not merely the transmission of information reminding the reader of the link between the words communication and community this title questions the american tradition of focusing only on mass communication s function as a means of social and political control

talking about money in a personal way remains more of a taboo than sex or politics this seems odd within a christian context since jesus addressed topics of money poverty and wealth more than any other concerns for many money becomes an idol we see it in our own culture as we pursue economic growth no matter the cost to the overall well being of god s creation when that happens enough is always more than we have right now and scarcity becomes the lens through which we see the world on a personal level this book opens up issues of scarcity and abundance idolatry and freedom on a societal level it invites exploration of greater equity and sustainability on both levels it empowers individuals and groups to apply their faith s values in practical ways while taking pastoral and prophetic stances the author suggests we need to experience the nurturing companionship of a wise compassionate pastor or spiritual guide in our relationship to money while also needing to experience the power strength anger and call to repentance of an old testament prophet people want to connect their values with everyday concerns while discovering ways to make a positive difference this book helps them do both includes a comprehensive study guide within the book for groups and individuals contributors include henri nouwen dave barry walter brueggemann david boyle lynne twist lewis hyde william stringfellow john haughey ched myers bill mckibben sallie mcfague william greider leonardo boff jean bertrand aristide victoria tauli corpuz maria harris rich lang wayne muller sharon parks rodney clapp ted nace lester brown pete barnes andy loving edgar cahn sarah tarver wahlquist susan wilkes jim klobuchar

combining the economic analysis of regulation with a history of the politics of government control in the united states the economics of regulation and antitrust helps students understand how regulation has developed and continues to change and how it affects

economic and social welfare burges aims to help students understand the role of regulation in a context where markets serve as the primary but not the sole agency for society in making resource allocations the economics of regulation and antitrust also places special emphasis on the economic efficiency of regulation
