The UNIX System User's Manual 1986

a detailed description of mh a message handling system built on the unix time sharing system that enables users to compose send receive store retrieve forward and reply to messages the design of mh is based on a different approach than is usually used for large systems the command interface to mh is the unix shell the standard unix command interpreter and each message handling activity is a separate command each program is driven from and updates a private user environment which contains information permitting mh to be custom tailored mh stores each message as a separate file and utilizes the tree structured unix file system to organize groups of files into directories or folders all unix facilities for dealing with files and directories are applicable to messages and folders obviating the need for code that duplicates the supporting system facilities this report will familiarize non users with the general features of message handling systems and it provides a complete user s manual for system users author

The MH Message Handling System 1984

this is the complete guide and reference to the oberon system designed by wirth and gutknecht at eth zurich featuring a user guide a description of the module

library and a programming guide this book also contains a wealth of practical real world examples and illustrations
