handbook of the behavioral neurobiology of serotonin second edition builds on the success of the first edition by continuing to provide a detailed and comprehensive overview of the many facets of behavioral serotonin research the text expands on the two key topics behavioral control sensory processing ultrasonic vocalization and melatonin and sleep control and psychiatric disorders including its role on psychostimulant abuse and addiction the new edition includes two new sections on the serotonin systems interactions and the involvement of serotonin in neurological disorders and associated treatment serotonin is a major neurotransmitters in the serotonergic system which one of the best studied and understood transmitter systems both are critically involved in the organization of all behaviors and in the regulation of emotion and mood features two new sections on serotonin systems interactions and serotonin in neurological disorders focuses on ionotropic and metabotropic 5 ht receptor involvement in behavior maps receptors and receptor signaling pathways to neurochemical and behavioral outcomes covers the interactions between serotonin melatonin and kynurenine pathways

this two volume work combines comprehensive information on the chemistry of the fluorinated heterocycles the material has been divided such that the first volume is dedicated to 5 membered fluorinated heterocycles and macrocycles while the second volume combines data connected with the chemistry of fluorine containing 6 membered heterocycles both volumes will be of interest to synthetic organic chemists in general and particularly for those colleagues working in the fields of heterocyclic compound chemistry materials chemistry medicinal chemistry and fluorine chemistry all information is presented and classified clearly to be effective source for broad auditory of chemists it will be interesting for scientists working in the field of inorganic and coordination chemistry fluorinated heterocycles are becoming increasingly important in many areas including the pharmaceutical industry materials science and agriculture the presence of fluorine can result in substantial functional changes in the biological as well as physicochemical properties of organic compounds incorporation of fluorine into drug molecules can greatly affect their physicochemical properties such as bond strength lipophilicity bioavailability conformation electrostatic potential dipole moment pka etc as well as pharmacokinetic properties such as tissue distribution rate of metabolism and pharmacological properties such as pharmacodynamics and toxicology
